
Virtual Machines Summary

VM Name	Private IP	VNet	Region	Role / Purpose	Installed / Services
Elaskiba (ELK + Kibana)	10.0.0.4	elaskiba-vnet	Korea Central	Elasticsearch + Kibana	Elasticsearch, Kibana
Fleet Server	10.0.0.5	elaskiba-vnet	Korea Central	Fleet Server (Management)	Elastic Fleet
osTicket (win)	10.2.0.4	win-vnet	Japan East	Ticketing System	osTicket
Mythic C2 Server	10.2.0.5	win-vnet	Japan East	C2 / Adversary Simulation	Mythic
myVm (Windows)	10.1.0.5	ubuntu-vnet	Japan West	Windows Endpoint (RDP)	Sysmon, Elastic Agent
Ubuntu Server	10.1.0.4	ubuntu-vnet	Japan West	Linux Endpoint	Elastic Agent

VNet Addressing (Actual)

VNet	Address Space	Subnet (Used)	Region
elaskiba-vnet (Hub)	10.0.0.0/16	10.0.0.0/24	Korea Central
win-vnet (Spoke)	10.2.0.0/16	10.2.0.0/24	Japan East
ubuntu-vnet (Spoke)	10.1.0.0/16	10.1.0.0/24	Japan West

Traffic / Data Flow Legend

- - - → (green)	Log Collection	Endpoints → Fleet Server
- - - → (red)	Data / Indexing	Fleet → Elasticsearch
- - - → (red)	Alerts / Tickets	Kibana / ELK → osTicket
- - - → (purple)	Attack Simulation	Mythic C2 → myVm (Windows)
- - - → (blue)	VNet Peering	Connected (Full Sync)

Key Points

- All VNets are peered through elaskiba-vnet (Hub and Spoke Model).
- Logs from myVm (Sysmon) and Ubuntu are collected by Fleet Server (10.0.0.5).
- Data is indexed in Elasticsearch (10.0.0.4) and visualized in Kibana.
- Incidents/alerts are sent (manually or via API) to osTicket (10.2.0.4).
- Mythic C2 (10.2.0.5) is used for controlled attack simulation.
